

示例Exam7：使用case建立一个菜单

编写shell脚本如下：

```
#!/bin/bash
echo "-----"
echo "1 Restore"
echo "2 Backup"
echo "3 Upload"
echo
echo -n "enter choice:"
read CHOICE
case "$CHOICE" in
1|R)
    echo "1 Restore";;      #如果输入1或者R 则显示1 Restore
2|B)
    echo "2 Backup";;
3|U)
    echo "3 Upload";;
*)
    echo "sorry!"
exit 1          #退出
esac
#end
```

运行结果：

```
[zhx@localhost test02]$ sudo bash test
[sudo] zhx 的密码：
-----
1 Restore
2 Backup
3 Upload

enter choice: 1
1 Restore
[zhx@localhost test02]$ sudo bash test
-----
1 Restore
2 Backup
3 Upload

enter choice: 3
3 Upload
[zhx@localhost test02]$ sudo bash test
-----
1 Restore
2 Backup
3 Upload

enter choice: 9
sorrv!
```
