

示例exam5：从键盘输入一个字符，根据字符判断。

编写shell脚本如下：

```
#!/bin/bash
echo -n "please input the answer:"
read i
#echo $i
if test $i = y
then
    echo "this answer is right!";
elif test $i = n
then
    echo "this answer is wrong."
else
    echo "Bad Input"
fi
#end
```

运行结果：

```
please input the answer:y
this answer is right!
[zhx@localhost test02]$ sudo bash test
please input the answer:p
this answer is wrong.
[zhx@localhost test02]$ sudo vi test
[zhx@localhost test02]$ sudo bash test
please input the answer:y
this answer is right!
[zhx@localhost test02]$ sudo bash test
please input the answer:o
Bad Input
[zhx@localhost test02]$ sudo bash test
please input the answer:n
this answer is wrong.
[zhx@localhost test02]$ sudo bash test
please input the answer:p
Bad Input
```
