示例Exam14: 定义change函数,并调用函数

编写shell脚本如下:

```
#!/bin/bash
abc=123
change()
{
   abc=456
}
echo "befor: $abc"
change
echo "after: $abc"
#end
```

运行结果如下:

[zhx@localhost test02]\$ sudo vi test
[zhx@localhost test02]\$ sudo sh test

befor: 123 after: 456
